

The Secrets of Plant Intelligence

@plantmelody.app

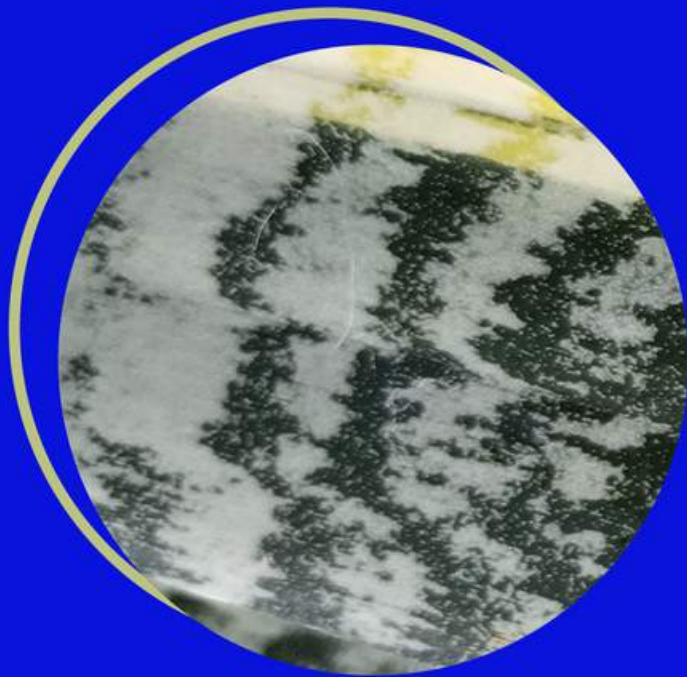

Plants can "SEE"

Their light-sensitive pigments allow them to "see" their neighbors by detecting infrared light emitted during photosynthesis.

Plants can "SMELL"

They communicate olfactorily with their neighbors and enemies. When danger approaches, they emit chemical signals to warn nearby plants.

Plants can "MAKE DECISIONS"

They assess environmental conditions and adjust their growth strategies accordingly.

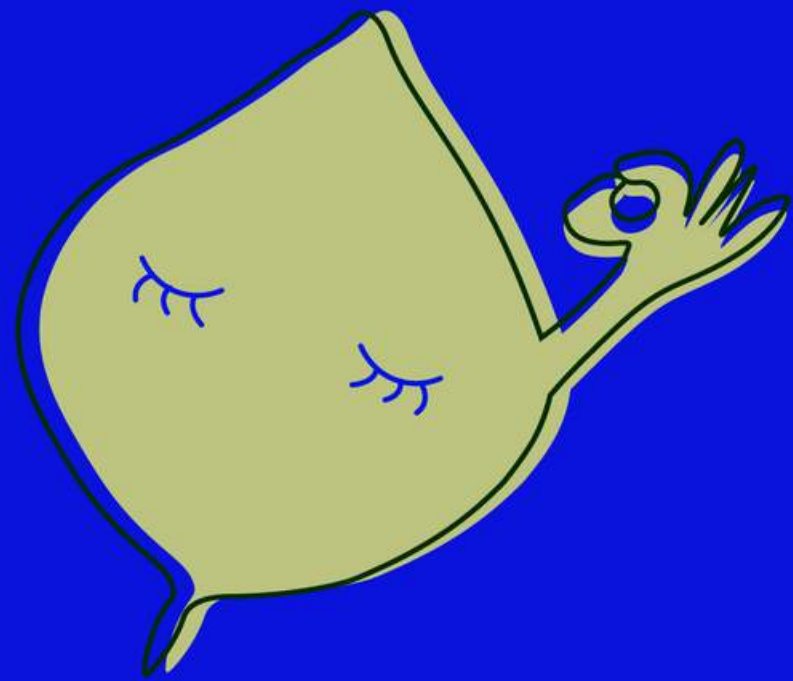

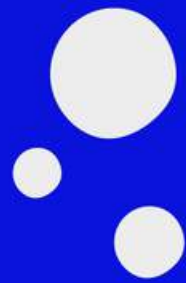

Plants can "REMEMBER"

They recall past weather conditions and herbivorous attacks.

Plants can "LISTEN TO MUSIC" ...

and enjoy it! ->

@plantmelody.app

Our research shows that plants can distinguish different sound frequencies and respond to them accordingly!

Inside The Plant Melody App, we placed scientifically tested tracks that once played for 15 minutes a day, can stimulate ->

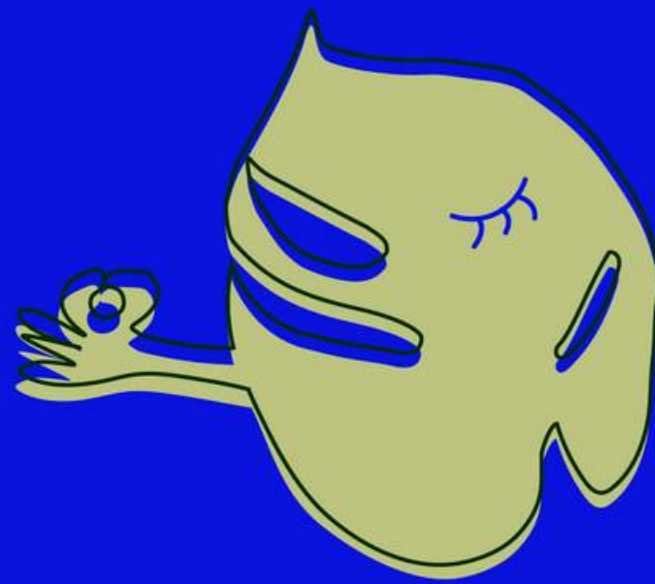

@plantmelody.app

- Plant growth
- Biomass accumulation
- Root development
- Stem extension
- Increased tolerance to biotic and abiotic stresses

Try Plant Melody and pamper
your intelligent green friends
with our magical waves!
